Release Date:	5/8/2003

XIVALINK VERSIONS AND PRODUCT FEATURES

The following table details what XiVA Powered Server features are available on which Servers for the purposes of XiVALink control.

The **Standard Set of Features** is defined as:

- Transport Controls (Start, Stop, Pause, SkipFwd, Skip Bwd, Seek Fwd, Seek Bwd, Disk Fwd, Disk Bwd, Random On/Off, Repeat On/Off)
- Browse by Album, Artist Name, Albums sorted by Artist, Genre, Albums sorted by Genre and Playlists
- Status Updates
- CD record functionality
- Online Lookup functionality
- RS232 and TCP/IP connectivity

Play CD from Tray is the ability to play a CD directly from the tray or slot in the Server, rather than having to record it to hard disk first.

IR Control Over XiVALink is the ability for the Server to respond to a command string over RS232 or TCP/IP and respond to it exactly as if it had received the corresponding IR code.

Improved Lookup Commands gave some simpler methods of triggering Online lookups as well as including CoverArt lookups (where applicable)

Presets are one button triggers that enable up to 30 pre-determined selections to be selected and played with Random and Repeat set to ON with one command.

Product	Latest XiVA SW	XiVALink SW	Standard Set of Features	Play CD From Tray	IR Control over XiVALink	Improved Lookup Commands	Presets
